### **“Energy Generation & Waste Water Treatment by Microbial Fuel Cell”**

(Summary: This project was executed to find techniques of effective utilization of waste (Microbes) and how it can be utilized to generate energy. A detailed study was done on the recent advances in the field and the Microbial Fuel cell was designed to generate energy upto 1.141 V from two 500ml tanks. The commercial conceptualization of the Microbial fuel cell was researched on as much as less optimum size with environment friendly and presented.)
