Research Work :

B.E Project Work :

" IMPLEMENTATION OF A CAN- BASED DIGITAL DRIVING SYSTEM FOR A VEHICLE ".

Abstract :

The project describes the development and implementation of a digital driving system for a semi-autonomous vehicle. CAN communication protocol is chosen to realize the objective. CAN stand for Controlled Area Network. Thus, to improve the driver-vehicle interface, an interactive digital system is designed. A microcontroller-based data acquisition system that uses ADC to bring all control data from analogue to digital format is used. The communication module used in this project is embedded networking by CAN (Controller Area Network). An easier driver-vehicle interface is realized by using a touch screen-LCD combination that provides for better interaction between the vehicle and the driver. In this project, we make use of three sensors. The temperature sensor, fuel level sensor and the moisture sensor.
