### Projects : RF Based Home Automation System

The main purpose of this project is to develop a Home Automation System with a RF controlled remote. Day by day technology is advancing and modern houses are also getting smarter with RF controlled switches in place of conventional switches. This RF based home automation system provides a better solution. In order to achieve this, at transmitter side an RF remote is interfaced to the 8051 microcontroller which sends ON/OFF instructions to the receiver wherein loads are connected. At the transmitter side, switches are arranged to operate the loads remotely through wireless communication system. The loads are interfaced to the microcontroller using opto-Isolator and Triacs.
